Editorial

Special Issue on the Brown–Maastricht Conferences

Two annual conferences focus broadly on general equilibrium theory and its implications, among others, for macroeconomics and monetary economics and finance: the Conference on Econometrics and Mathematical Economics (CEME), financed through the National Bureau of Economic Research, in the United States, and the European Workshop in General Equilibrium.

The Journal of Mathematical Economics decided in 2001 to publish a special issue with papers presented in these conferences and edited by guest editors chosen among the organizers of the two conferences.

In 2001, the CEME-NBER Conference was held at Brown University from 13 to 15 April and was organized by Herakles Polemarchakis, Roberto Serrano and Rajiv Vohra; the European Workshop in General Equilibrium was held at the Universiteit Maastricht from 17 to 19 May and was organized by Jean-Jacques Herings.

Jean-Jacques Herings, Herakles Polemarchakis and Rajiv Vohra edited the special issue.
